

Practice 2 : Get Connecting on a linux server by ssh

```
MacBook-Pro-de-Christine:~ tranchan$ ssh tranchant@10.2.14.18
tranchant@10.2.14.18's password:
Last login: Thu Oct  4 12:12:25 2018 from 10.2.14.149
[tranchant@master ~]$
```

Practice 3 : First steps : prompt & pwd

- What is the current/working directory just by looking the prompt?

Voici le prompt / invite de commande : [tranchant@master ~]\$

Le répertoire de travail est : ~ c'est à dire /home/formation1 (si le login est formation1) ou /home/tranchant (login = tranchant)

- Check the name of your working directory with pwd command?

```
[tranchant@master ~]$ pwd
/home/tranchant
```

- On the console, type your 2 first linux commands to get data necessary for the next (we will explain the two commands latter):

on copie le répertoire compressé **LINUX-TP.tar.gz** présent dans le répertoire **/data/FORMATION/2018/user/** dans le répertoire où on est . , ici **/home/tranchant**

```
[tranchant@master ~]$ cp /data/FORMATION/2018/user/LINUX-TP.tar.gz .
[tranchant@master ~]$ ls
LINUX-TP.tar.gz
```

on décomprime le répertoire

```
[tranchant@master ~]$ tar zxvf LINUX-TP.tar.gz
LINUX-TP/
LINUX-TP/Bank/
LINUX-TP/Bank/referenceRnaseqGFF.gff3
LINUX-TP/Bank/referencePindelChr1.fasta
LINUX-TP/Bank/referencePindelChr1.fasta.fai
LINUX-TP/Bank/referencecelrigin.dict

..
LINUX-TP/Script/hash.pl
LINUX-TP/Script/transliterate.pl
LINUX-TP/transcriptsAssembly.fasta
[tranchant@master ~]$
```

- Check through filezilla the content of your home directory on the server now (cf. filetree just below)
- Delete through filezilla the file **LINUX-TP.tar.gz** on the server

Practice 4 : List the files using ls command

- List the content of your home directory

```
[tranchant@master ~]$ ls

```

```
[tranchant@master ~]$ ls LINUX-TP/Fasta/

[tranchant@master ~]$
```

chemin relatif

```
[tranchant@master ~]$ pwd  
/home/tranchant
```

```
[tranchant@master ~]$ ls LINUX-TP/Data/

Practice 10 : Blast analysis

Creating a custom database with **makeblastdb**

As we use a custom database for the first time, If we have a fasta format file of these sequences we have to create a database from our fasta format file AllEst.fasta with the makeblastdb command.

- Go into the bank directory and create a nucleotide database by typing:

```
makeblastdb -in AllEst.fasta -dbtype nucl -parse_seqids
```

- List the content of the directory to check if the database has been indexed

BLASTing against our remote database

- Go into the blastAnalysis directory
- Run the blast by typing the following command with the outfmt equals to 6 :

```
blastn -query fastaFile -db databaseFile -outfmt [0-11] -out resultFile
```

Parsing the results file

- Display the first 10 lines of the file - head

```
[tranchant@node0 Blast]$ pwd  
/scratch/Blast  
[tranchant@node0 Blast]$ ls NMT-EST.outfmt*  
NMT-EST.outfmt0.blastn NMT-EST.outfmt6.blastn
```

- Display the first 15 lines of the file - head

```
[tranchant@node0 Blast]$ head NMT-EST.outfmt6.blastn

Practice 11 : Redirecting a command output to a File with >

- Extract all ESTs identifiers and print them in the file ESTs_accession.list - cut >

```
[tranchant@node0 Blast]$ cut -f 2 NMT-EST.outfmt6.blastn | wc -l  
5537
```

```
[tranchant@node0 Blast]$ cut -f 2 NMT-EST.outfmt6.blastn > EST_accession.list
```

Practice 12 : Sending data from one command to another (piping) with |

- How many sequences have a homology with EST sequences ? (TIPs: cut command with sort -u (uniq) or uniq command))

```
[tranchant@node0 Blast]$ cut -f 2 NMT-EST.outfmt6.blastn | sort -u | wc -l  
293
```

Practice 13 : Running many commands with | - grep

To get some basics stats of the output VCF file

/scratch/LINUX-TP/VCF/OgOb-all-MSU7-CHR6.GATKVARIANTFILTRATION.vcf, let's use linux command!

- How many raw polymorphisms were detected (Displaying all the lines which does not start with # / header lines)?

```
[tranchant@node0 vcf]$ pwd  
/home/tranchant/LINUX-TP/Data/vcf
```

```
[tranchant@node0 vcf]$ ls  
200000-CHR9.GATKVARIANTFILTRATION.vcf duplcVCF singleVCF testsnmf.gen0 vcfForRecalibration vcfForSNiPlay
```

- How many polymorphisms were considered good after filtering steps by GATK VARIANTFILTRATION (ie marked PASS)?

```
[tranchant@node0 vcf]$ grep "#" 200000-CHR9.GATKVARIANTFILTRATION.vcf | head -n1  
##fileformat=VCFv4.1
```

```
[tranchant@node0 vcf]$ grep "#" 200000-CHR9.GATKVARIANTFILTRATION.vcf -v | head -n1

BONUS

- Renommer les fichiers fastq avec commande rename dans le répertoire (on retire le mot Mapped du nom du fichier) - `/home/trabant/LINUX-TP/Data/fastq/assembly/pairedOneIndivuPacaya`

```
[trabant@node0 pairedOneIndivuPacaya]$ pwd
/home/trabant/LINUX-TP/Data/fastq/assembly/pairedOneIndivuPacaya
```

```
[trabant@node0 pairedOneIndivuPacaya]$ ls
g02L5Mapped_R1 fq g02L5Mapped_R2 fq
```

```
[trabant@node0 pairedOneIndivuPacaya]$ rename "Mapped" "" *fq
```

```
[trabant@node0 pairedOneIndivuPacaya]$ ls
g02L5_R1 fq g02L5_R2 fq
```

- Substituer un motif par un autre, ici ">id" par ">chr_id" dans le fichier /home/tranchant/LINUX-TP/Bank/referenceIorigin.fasta

```

```
[tranchant@node0 Bank]$ head referenceIorigin.fasta
